OpenBudgets.eu

- The current lack of budget and transaction open data makes it very hard for citizens and other stakeholders to get an overview on public spending in their respective administrative region
 - heterogenic nature of data formats used by public administrations is a technical barrier to both data providers and data consumers
- The OpenBudgets.eu project aims to provide a generic framework and concrete tools for supporting financial transparency
 - Scalable
 - Easy-to-use
 - Flexible
 - attractive
